Meredith's kids leave for school at eight and Meredith's first class is at 8:30. She needs a way to get to school fast and in time for class.

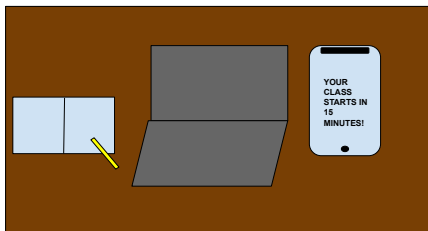

It's Meredith's first day of classes and she is nervous that she won't make it to her classes on time. Her advisor had mention a GPS app that helps students manage their time and help find their buildings and classes.

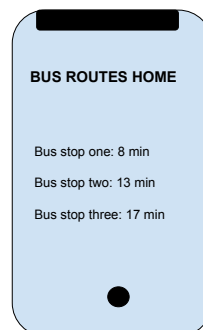

The app lets her know the available bus stops around her and how long the waits are.

Since Meredith has some time before her Chemistry class, she uses the app to find a dining hall and she ends up going to Russell.

Meredith got lunch and started to study for her classes. Meredith got carried away and lost track of time, but the app reminded her that her class is starting soon so she made it to class in time.

After her last class, the app lets Meredith know the closest and the soonest bus stops are to go home.
